EDUCATION

Vellore Institute of Technology (VIT), Vellore
Integrated M.Tech, Computer Science and Engineering 2023 – 2028

SUMMARY

Computer Science Master's student at VIT Vellore with 5+ production-grade projects spanning full-stack development, blockchain systems, and AI/ML. Passionate about building high-performance intelligent systems — from low-level 8086 assembly pipelines to modern React frontends and Ethereum smart contracts. Proven ability to architect end-to-end solutions integrating LLMs, computer vision, and decentralized infrastructure.

SKILLS

Languages: Java, JavaScript, TypeScript, C, C++, Python, SQL, Solidity, 8086 Assembly.
Frameworks & Libraries: React, Next.js, Node.js, Flask, FastAPI, Tailwind CSS, PyTorch, OpenCV, Three.js, Pandas.
Infrastructure & Tools: Git, Docker, Vite, Supabase, Vercel, AWS, Azure, Figma, Hardhat, IPFS, Excel.
AI/ML & Blockchain: LLM Integration, Computer Vision, NLP, Semantic Embeddings, ERC-1155 Smart Contracts.

PROJECTS

Mentora | Full-Stack Mentorship Platform ***React, Vite, Tailwind CSS, Supabase, Vercel***

A full-stack mentorship platform connecting students and mentors with real-time database updates, secure authentication, and a CI/CD-deployed production environment. Impact:

- Architected a responsive SPA using React, Vite, and Tailwind CSS with Supabase BaaS handling authentication and real-time database updates, ensuring scalable and secure data management.
- Deployed via Vercel with a full CI/CD pipeline, implementing dynamic routing and state management for seamless multi-role user flows in a live production environment.

SupplyTrace | Decentralized Supply Chain Provenance ***Solidity, React, Hardhat, The Graph, IPFS***

A blockchain-based provenance system on Ethereum Sepolia using UUPS-upgradeable smart contracts and a role-gated state machine for tamper-proof product tracking across a 3-tier supply chain. Impact:

- Architected a UUPS-upgradeable ERC-1155 smart contract ecosystem with a Manufacturer → Distributor → Retailer state machine, enforcing tamper-proof on-chain provenance with multi-sig governance via Gnosis Safe and OpenZeppelin AccessControl.
- Engineered a high-performance indexing layer using The Graph subgraph for real-time custody transfers, validated through 60+ unit tests achieving stable sub-second state transitions across all role transitions.

TalentFit | Intelligent Screening Engine ***Python, Flask, SBERT, React, Tailwind CSS***

An intelligent resume screening engine combining TF-IDF keyword matching and SBERT semantic embeddings to evaluate resume-to-JD alignment with contextual nuance. Impact:

- Architected a dual-scoring engine (40% TF-IDF / 60% SBERT) with a multi-format parsing pipeline (PDF, DOCX, TXT) auto-identifying 35+ technical skill clusters, maintaining a lightweight ~300MB memory footprint.
- Optimized inference to sub-3-second processing per document with a real-time React 18 dashboard featuring color-coded skill gap visualizations.

EXPERIENCE

Robomations | India Apr 2022 – May 2022
Robotics & Electronics Intern

- Engineered hardware systems including an Edge Detector, Line Follower robot, and Battle Bot using Arduino Uno, L293D/L298N motor drivers, and NRF24L01 wireless RF modules.
- Designed and rendered a 3D architectural model in SketchUp with a VR-viewable video walkthrough, leveraging tools like Blender, Gravity Sketch, and AutoCAD.
- Applied core electronics fundamentals — 555 IC circuits, logic gates, LDR/ultrasonic sensors, and breadboard prototyping in a hands-on production environment.
